

*"For all your refinishing supplies, equipment and training needs..."*

## High Build Primer

This epoxy/urethane blend primer is perfect for smoothing out those problem surfaces quickly and effectively. You will be amazed to see how fast those wood grain patterns and imperfections disappear before your very eyes. No more unsightly wood grain patterns ruining the look of your topcoat! No more skim coating wood cabinets with chip filler to hide the pattern or loading up on several coats of low build primer.

High Build Primer is great as a benchtop under coat and will cover those unsightly benchtop joins and small defects.

Cast iron baths can also absorb a lot of filler, and time taken to smooth out the surface. High build primer fills the rough surfaces, leaving a smooth finish without as much filling and sanding.

NAPCO High Build Primer Resin gives the best adhesion possible on wood surfaces and porcelain and ceramic bathtubs and tile.

Save lots of time and aggravation with NAPCO High Build Primer!

You will wonder how you ever did without it.
