

Wagner's Maxum II Spray Gun

Using the best products and techniques in the industry just won't cut it if you're using sub-par equipment. A good spray gun is one of the best investments you can make for your business.

Wagner's Maxum II Spray Gun provides the finest atomization in the industry, giving you a beautiful, glossy finish with less dry spray and rough spots than with other spray guns. With this spray gun, you can atomize a wider variety of coatings, work at greater speeds, and experience less operator fatigue achieving the quality results that meet the demands of any job.

Wagner's Maxum II Spray Gun includes a patented bleeder to non-bleeder conversion feature for greater versatility. The non-bleed feature eliminates constant air discharge that can blow dust onto newly painted surfaces. The bleed configuration provides maximum airflow for breaking up highly viscous materials.

The Maxum II's patented grip handle design gives you stay-cool protection and its 2-stage trigger decreases trigger force and operator fatigue.

You can choose from 3 spray patterns: vertical flat, horizontal flat, or round with the "click in" air cap. The guided air cap provides you with perfect spray pattern alignment and the built-in air control (located on the back of the gun) adjusts airflow for various coating viscosities. Its multi-position pick-up tube (fluid tube) means longer use without those inconvenient refills when spraying at an angle. Moreover, you can achieve even greater precision by adjusting the material control knob at the rear of your spray gun while it is operating!

Wagner's state of the art Maxum II Spray Gun features a durable stainless steel needle and nozzle and comes complete with external packing nut adjustments and solvent-proof Teflon seals.

It arrives with a #3 Projection Set as a standard inclusion (additional Projection Sets - #2, #4, #5 and #6 - are also available upon request).
