

*"For all your refinishing supplies, equipment and training needs..."*

## **Napco Mega Fast High Gloss Brite White, Clear and Black Resin**

The most technically advanced coating in the world today.

NAPCO's proprietary modified aliphatic polyurethane provides amazing resilience to cracking during expansion and contraction due to temperature fluctuations. Unlike epoxy topcoats, Poly-Glass will not crack or yellow over time. Poly-Glass resin provides a surface that is harder than acrylic or enamel, yet flexible enough to withstand the impact of dropped objects. This resilience is essential to its durability and long wear. It also provides terrific stain resistance and colour retention, as compared to other types of bathtub coatings.

Each 1 gallon container of Poly-Glass resin weighs an amazing 3 lbs, which is more than most other coatings on the market. This is due to the high solids content of Poly-Glass resin – an incredible 69% solids by weight. The higher solids content of Poly-Glass resin gives the topcoat greater ability to cover the old surface with less coating than with other brands, saving you more money. Each gallon of Poly-Glass resin provides enough material to spray up to 16 bathtubs.

*"For all your refinishing supplies, equipment and training needs..."*

Poly-Glass resin's high Titanium Dioxide content provides whiteness, brightness and opacity, and does not contain any cheap filler. You and your customers will be thrilled with the super shiny 95+% gloss.

Before

After

Poly-Glass is your topcoat of choice for bathtubs, sinks, tiles, vanities, appliances, countertops, and cabinets.

Not only is Poly-Glass great for bathrooms, but for kitchens as well. It has strong adhesion and great coverage is easily achieved without primers or bonding agents. This makes Poly-Glass extremely time and cost efficient in kitchen benches and cabinets. Pair this with the Flint-Stone II bench coatings and you have the best kitchen range available.
