

"For all your refinishing supplies, equipment and training needs..."

NAPCO Accelerator

We understand the difficulty extreme weather can cause a refinisher. There is nothing worse on a freezing cold day than your product taking too long to dry. You have better things to do.

Now, you can speed up the dry time on a cold day.

NAPCO Accelerator speeds the initial drying time of the topcoat, allowing the finish to tack up more quickly. This greatly reduces the amount of dust in the finish, giving you a smoother and glossier look.

NAPCO Accelerator is also useful for avoiding runs in cooler environments, because runs occur more frequently in colder temperatures.

Speeding the initial dry time also allows the refinisher to remove masking paper and tape and apply caulk much sooner than usual - saving lots of time on the job.

NAPCO Accelerator is also economical - a 4-ounce bottle is all you need for 12 standard bathtubs!

For extreme hotter climates – and in Australia you could live in both – take a look at NAPCO Retarder to reduce your dry time.
