

"For all your refinishing supplies, equipment and training needs..."

NAPCO Retarder

We understand the difficulty extreme weather can cause a refinisher. There is nothing worse on a hot day than your product drying too quickly. Hot weather can cause that unattractive "orange peel" texture, ruining the look of your finish. Fortunately, there's a cure for this problem.

Now, you can slow down the dry time when you want to.

NAPCO Retarder slows the initial drying time of the topcoat. The thinner evaporates or "flashes off" more slowly, allowing a longer period of time for your topcoat to "skin over". This gives your finish a smoother and shinier look in hot weather conditions.

NAPCO Retarder is a versatile product. You can use it with any Poly-Glass™ topcoat. It gives you flexibility to acquire the speed you need with Mega-Fast coatings, without adversely affecting the 4-hour cure, provided that you do not use more than the recommended amount. NAPCO Retarder is also economical - a 4-ounce bottle is all you need for 12 standard bathtubs!

For extreme colder climates – and in Australia you could live in both – take a look at NAPCO Accelerator to speed up your dry time.
