

"For all your refinishing supplies, equipment and training needs..."

NAPCO Silicone Digestor

NAPCO Silicone Digestor works by "eating" silicone contamination, not just melting silicone and spreading it around like other products on the market.

Silicone is one of the world's most stubborn substances - it even manages to stand up to acids! Neither conventional scraping nor products that only melt silicone can easily remove all traces of silicone from the caulk line. Only NAPCO's Silicone Digestor works easily and effectively to eradicate those hard to repair fish eyes caused by silicone contamination.

It's so easy to use - just dab a little on the silicone "skin" along the caulk line and let Silicone Digestor do the hard work for you. Achieving a smooth, blemish-free finish has never been easier!
