

*"For all your refinishing supplies, equipment and training needs..."*

## **Napco Polycleaner**

Preparation is "half the battle" for the challenge of refinishing. This can also be frustrating if your commercial cleaning product is less effective than a supermarket brand!

Ensure a smooth and long lasting finish by cleaning the surface with NAPCO Polycleaner.

This phosphoric acid-based detergent emulsifies dirt and removes mould, mineral deposits and even stubborn soap scum. Using Polycleaner before etching provides a grime and contaminant-free work area and saves you scrubbing time.

Polycleaner is safe for use on any non-painted surface prior to resurfacing: bathtubs, wash basins, countertops, cabinets, wall tile, fibreglass, acrylic, cultured marble, porcelain, steel, marble and even china toilet bowls.
