

"For all your refinishing supplies, equipment and training needs..."

Poly-Glass Colour Dispersion/Tinting Kit

Have you dealt with the suppliers who attempt to sell multiple shades of white to keep you buying outrageous stock levels of coating to cart around!

STOP!

There is no need, mix the colours you need on site, ready to colour match against the bathroom itself with this convenient Poly-Glass Colour Dispersion/Tinting Kit.

This simple, but useful tint kit mixes easily with NAPCO's topcoats or primers to create beautifully matched colours. Make chip repairs invisible or match the customer's existing fixtures on the job site!

These petrochemical solvent-based colorants are general purpose dispersions compatible with all non-aqueous paints such as thermosetting epoxies, polyesters, and polyurethane coatings.

The kit contains 12 - 2 ounce bottles of the most commonly used colorants in our industry: Lamp Black, Burnt Umber, Violet, Pthalo Blue, Pthalo Green, Titanium White, Red Iron Oxide, Quinacridone Red, Medium Yellow, Yellow Oxide, Light Yellow and B.S. Red.
