

"For all your refinishing supplies, equipment and training needs..."

Poly-bond Wipe On Primer

After the development of Napco's 4-hour cure Mega Fast resin, Poly-bond Wipe On Primer is the most significant innovation in resurfacing technology.

This ready-to-use formula is just as effective as spray-on primers, but doesn't require mixing or spraying! You eliminate gun clean up time, and it dries super fast - in only 5 minutes. Save time, money and labour - all without compromising quality in surface preparation!

NAPCO Poly-Bond Primer is formulated for use with polyurethane topcoats on porcelain and ceramic surfaces. The active ingredient in Poly-Bond is silane - the best wipe-on adhesion promoter available in our industry.
